

Turning Receipt Chaos into Audit-Ready Business Intelligence

- Hybrid Vision AI + Offline OCR Engine
- Built with Next.js 16 & React 19
- Designed for Small Traders & SMBs

The \$40 Billion Paper Receipt Problem

Lost Revenue & Discrepancies

67% of small traders miss tax deductions due to lost or faded receipts.
Manual entry creates math errors and mismatched totals.

Time-Consuming Manual Entry

Shopkeepers spend 5+ hours weekly typing line items into spreadsheets.
Handwritten and thermal receipts degrade fast.

Connectivity & Privacy Barriers

Cloud OCR fails in low-network regions.
Businesses hesitate to send sensitive financials to remote APIs.

 Problem validated by merchant interviews and hackathon user testing.

Meet Digitizer

Instant, Intelligent & Resilient

- ⚡ Instant multi-provider Vision AI — messy handwriting in **~2s**
- 🔒 100% offline capability with Tesseract.js fallback
- 📊 Audit-ready accuracy with automated math verification

📄 Built for small traders, shopkeepers, freelancers, and SMB accountants.

Innovation That Sets Digitizer Apart

Field Confidence Scoring

Per-field accuracy 0.0–1.0.
Amber flags for uncertain values
and quick human verification.

Live Math Sync Engine

Auto-validate line items vs
totals. 1-Click Sync to reconcile
discrepancies.

Vendor Memory & Learning

Remembers vendors, auto-fills
categories, detects >2x price
anomalies.

Root-Cause Insights Engine

Surface spend patterns — day spikes, supplier frequency, actionable recommendations.

Built for Real-World Business Workflows

Vision AI + Offline OCR

Codex Vision / GPT-4o / Claude Sonnet + local Tesseract.js fallback for offline reliability.

14 Smart Categories & Currencies

Retail, inventory, transport, utilities, food — multi-currency auto-detection (£, ₹, \$, €).

Interactive Lightbox & Tools

High-res viewer with zoom, rotation, and manual correction tools for accountants.

Confidence-Aware PDF & CSV

1-Click exports to QuickBooks/Excel with confidence tags for audit review.

High-Performance Tech Stack

Next.js Frontend

Vision AI REST

Tesseract.js WASM

Local JSON Store

Frontend: Next.js 16 + React 19 + Tailwind CSS (dark mode). Dual-engine OCR: Vision AI REST APIs (structured JSON) with Tesseract.js WASM fallback. Persistence: local JSON store and API routes (/api/expenses, /api/process-receipt) plus vendor-memory.json.

From Receipt to Insight in 4 Seconds

Step 1: Upload or snap the receipt. • Step 2: AI extracts vendor, date, items, taxes, currency. • Step 3: Amber flags and 1-Click math sync for instant correction. • Step 4: Save to vendor memory, export PDF/CSV for tax filing.

Empowering 400M+ Small Businesses Worldwide

85%

Time Reduction

Reduce manual logging and data entry time by 85%.

100%

Tax Accuracy

Eliminate missed deductions and sum discrepancies with audit-ready exports.

\$0

Zero Setup Cost

Offline-first: no required subscriptions or API keys to start.

Target Personas:  Local retail & grocery •  Freelancers & service traders •  SMB accountants & bookkeepers

What's Next for Digitizer

Now — Hackathon MVP

- Hybrid Vision AI + Tesseract.js fallback
- Live math sync & vendor memory
- PDF/CSV export with confidence tags

Next Quarter

- WhatsApp / Telegram receipt bot
- Direct 1-Click push to Tally & QuickBooks

Future Scale

- Bank statement reconciliation
- Multi-tenant cloud sync & role-based admin

Digitizer: The Future of Smart Expense Management

Key Takeaways

- Solve real financial pain for millions of small traders
- Robust hybrid architecture — AI + 100% offline fallback
- Production-ready features: math sync & anomaly detection

Get Involved

Live demo, codebase, and prototype available on GitHub.
Request demo: snap a receipt → see audit-ready export in 4s.

Questions? Demo now — we'll scan a receipt live.
